Maintaining Your Marble Counters

Treat your marble countertops as you would a piece of fine furniture.

We do not warranty or repair etching, scratching, grazing or wear on your marble surfaces.

Natural stone is a product of nature and will vary in color and shade. It may contain natural imperfections including fissure cracks, color variations and irregular markings, adding to the natural beauty of the stone. These are characteristics of natural stone and not considered defects. We are not responsible for fixing or repairing natural imperfections on the surface of the stone.

Your marble counters are sealed at the time of installation.

We recommend that you re-seal your marble counters quarterly (more often in high use areas) with a product like Stonetech BulletProof Sealer. This product can be purchased from us or at Bedrosian's Tile Supply.

The simplest way to clean marble counters is with your damp dishcloth. You may use soap and water or a product like Stonetech Revitalizer.

Do not use any type of cleaners with acid, bleach, ammonia, vinegar or any abrasive cleaner.
